

Provisionalisation is the most Under-Estimated restorative treatment stage. In fact, provisionals fulfill so many vital tasks – such as post-prep protection, dentin conditioning, occlusal scheme retention, testing of modified aesthetics and function... ensuring the long-term success of any prosthodontic treatment. Most importantly, long-term provisionals allow the patient to better manage the financial aspect of restorative treatment while stopping the functional and structural degradation.

Content:

Choice of Provisional Materials

- Which material works best for each situation (BisGMA/TEGDMA, UDMA, Acrylic Resin Methyl Methacrylate)?
- Direct and indirect techniques from single tooth to full mouth provisionals
- Tips and tricks of how to fabricate fast a perfectly fitting provisional
